# The Many Advantages You Enjoy by Choosing Your Furniture and Furnishings at Aaron's

When you come here to buy Furniture, Rugs,

Stoves or Homefurnishings—you can make your selection from Six Big Floors and Basement-larger varieties and assortments than shown in any other store in this section. And it is all new merchandise, fresh from the manufacturers—the very latest creations that the markets afford.

The point is this. At Aaron's—Because of

the unusually large and complete stocks—you have a better opportunity to choose exactly the things you need. You may be wanting only a single Rocker, a Chair, a Rug, a Dining Room Suite, or a Living Room Suite, perhaps, but by seeing many different styles, it will be easier to decide and you'll be far better suited than if you only had one or two to look at.

Then, too, every article you purchase here is of guaranteed AARON QUALITY. It's the kind of Furniture that will give long-lasting service and complete satisfaction -- the kind that 'grows old gracefully"-that you can well be proud of having in your Home—the kind you'll really enjoy living with.

Buying for four large, busy stores—directly

from the manufacturers—we are naturally able to make our purchases at advantageous price concessions. The savings we effect in this way are passed right on to you. That's why you'll always find our prices consistently LOWER than elsewhere.

vious year.

Chicago, with the greatest year of building achievement in its history, trands feat among leeding chies with great gains in building projects during the year. The figures warrant an estimate for 1922 of \$5.826,000,000 worth of planned buildings or nearly \$1,000,000,000 more than ever before reported.

Next to Chicago, which scored a gain of \$88,000,000 over the preceding year, the most active is ilding centres were Philadelphia, with a gain of \$71,400,000, New York City, with \$59,000,000; Los Angeles, \$18,000,000; Detreet, \$15,000,000 and Booton, \$32,500,000.

An interesting type of small house, artistically designed. Specifications: Stude with sheathing and studen on wire lath. Interior: rough-frowelled plaster; Ragi: mass-groad or brown asphalt shingles.

Small House Is Popular Small House is Popular

The small house, with modifications to suit clouste and the individual taster of the owner, proved the most popular type of construction among home builders. Architects and contractors report that the hullders of small homes are insisting upon equipping their houses with all modern devices common to apartment houses in the larger cities. The competent housewife has become enumered with the small house, because she has found it easier to manage if chance or necessity make it "a servanties" home.

or necessity make it is an extended home."

Architects also report that in line with the demand for labor-saving equipment there is also a heavy demand for materials that reduce fire hazard. Experience has shown that fire resistant building margials are also time and weather resistant. Where every cent counts in building a home and the coast is spread over a number of years, the fact that the roof, for instance, may have to be replaced in a decade must be considered. The insurance rate in an

added consideration and when lower rates may be obtained by using fresarie reofing materials those materials are demanded. Brick and stucce houses, with roofs of authalt shingles, have been shown to be more extersively used of late, on account of their greater durability and fire-resistant qualities. A few decades ago, when timber was more pleatiful and less expensive, roofing problems did not call for the great consideration they do today. Fire laws in various municipalities were not as stringent then at they now me and the costs of fire-resistant material compared with wood, were high. In this day, initial cost is not proportionately higher and the first cost is practically wiped out in the saving through the lower manatenance and the lower insurance rates in effect where approved fire-proof material is used in roof construction.

The accompanying sketch of a popular type of small house shows how a home can be built of fire-resistant and weather-proof materials at comparatively low cost.
